5

A F F I D A V I T

6

7 I, DAVID A. TAULI, of legal age, Filipino, married and a resident of
8 Calaanan, Canitoan, Cagayan de Oro City, a regular employee of Cagayan Electric
9 Power and Light Co., Inc. (CEPALCO), with office address located at CEPALCO
10 Bldg, 44 Toribio Chaves Street, Cagayan de Oro City, after having been duly sworn
11 in accordance with law, do hereby depose and declare as follows:

12

13 1. How long have you been employed with CEPALCO?

14

15 I have been an employee of CEPALCO for 28 years.

16

17 2. What is your occupation?

18

19 I am an electrical engineer by profession.

20

21 3. What is your current position in the company?

22

23 At present, I am Senior Vice President, and Head of the Engineering Services
24 Division.

25

26 4. As the Head of Engineering Services Division, what are your main functions?

27

28 As Head of the ESD, I am responsible for providing overall management and
29 general directions for the services and functions of the different units and
30 persons in the ESD, such as Line Construction, Distribution System Operations,
31 System Planning and Design, Line Construction and Maintenance, and
32 Technical Services. As ESD Head, I also provide general directions for Power
33 Supply Development, including the development Small Hydro and Renewable
34 Energy Sources, Distributed Generation, and Demand-Side Management.

35

36 5. How long have you been the Head of Engineering Services Division?

37

38 I have been the head of the ESD for the past 10 years.

1 6. Before you became the Head of the Engineering Services Division, what was
2 your position in the company?

3

4 I became an employee of CEPALCO in 1978, and from 1978 to 1981 I held the
5 position of Design Engineer under the System Planning and Design Department.
6 From 1981 to 1986 I was the department head of the System Development and
7 Engineering Department. From 1986 to 1990 I was the department head of the
8 System Operations and Design Department (SODD). In October 1990 I was
9 designated as a Vice President, and I remained as the department head of SODD
10 until 1993, when I became the division head of the Engineering Planning and
11 Services Division. In 1996, all engineering services units of CEPALCO were
12 integrated into a single Engineering Services Division (ESD), and I was
13 designated the division head for the ESD.

14

15 7. Aside from your position as the Head of Engineering Services Division, what
16 other important position do you hold?

17

18 I am also a member of the CEPALCO Management Committee (ManCom), and
19 have been a member of the ManCom since 1986.

20

21 8. Being a member of the Management Committee, what are your responsibilities
22 and involvement in this committee?

23

24 As a member of the ManCom, I provide general direction and oversight for
25 corporate functions and services other than those under the ESD which I directly
26 supervise. And as a member of the ManCom, I participate in the formulation of
27 corporate policies and in decision making on major issues affecting the
28 company.

29

30 9. What major trainings, seminars and conferences have you attended which are
31 related to your function as Head of Engineering Services Division?

32

33 The major trainings, seminars and conferences that I have participated more
34 recently in and that relate to my function as head of the ESD are enumerated
35 below:

36

37

1 REGIONAL DISSEMINATION WORKSHOP ON OPPORTUNITIES FOR
2 RENEWABLE ENERGY DISTRIBUTED GENERATION IN ASEAN
3 August 24, 2006, Hyatt Regency Hotel, Metro Manila, Philippines
4
5 2005/2006 IEEE PES TRANSMISSION AND DISTRIBUTION
6 CONFERENCE AND EXPOSITION
7 May 21-24, 2006, Dallas Convention Center, Dallas, Texas
8
9 WORKSHOP ON THE FEASIBILITY STUDY FOR DISTRIBUTED
10 GENERATION AND RENEWABLE ENERGY PORTFOLIO OF A
11 DISTRIBUTION UTILITY
12 October 27-28, 2005, Narai Hotel, Bangkok, Thailand [P]
13 DAT gave one of the Keynote Addresses
14
15 FIRST ERC-MINDANAO DU'S CONSULTATIVE CONFERENCE
16 September 8-9, 2005, Maxandrea Hotel, Cagayan De Oro City
17
18 PEPOA SEMINAR ON PERFORMANCE-BASED RATES
19 March 8-9, 2005, Linden Suites, Ortigas Center, Pasig City, Philippines
20
21 DISTRIBUTION DEVELOPMENT PLAN (DDP) WORKSHOP
22 Conducted by the Department of Energy
23 March 9-10, 2004, New World Renaissance Hotel, Makati City [P]
24 DAT presented a paper on the CEPALCO Distribution Development Plan
25
26 POWERLINE TECHNOLOGY, METERING & POWER CONTROL
27 CONFERENCE-WORKSHOP
28 December 8-9, 2003, City Garden Hotel, Makati City
29
30 INTERNATIONAL CONFERENCE ON CHALLENGES TO
31 DEVELOPMENT: INNOVATION AND CHANGE IN REGULATION AND
32 COMPETITION
33 October 13-15, 2003, EDSA Shangri-La Hotel, Mandaluyong City, Metro
34 Manila
35
36 WORKSHOP ON DISTRIBUTION DEVELOPMENT PLANNING
37 Conducted by Department of Energy
38 July 7, 2003, DOE Complex, Fort Bonifacio, Makati City, Metro Manila

1 PRICE CONTROL FOR ELECTRICITY DISTRIBUTION NETWORKS
2 March 4, 2003, JMT Building, Ortigas Center, Metro Manila
3
4 DISTRIBUTECH 2002 CONFERENCE AND EXHIBITION
5 February 27 – March 1, 2002, Miami Beach Convention Center, Miami Beach,
6 Florida
7
8 STUDY VISIT ON DISTRIBUTION SYSTEM RELIABILITY TO U.S.
9 UTILITIES IN FLORIDA
10 Conducted by the EPRI-PEAC Corporation of Knoxville, Tennessee
11 February 24 – 26, 2002, Florida, U.S.A.
12
13 CONSULTATIVE WORKSHOP ON “PERFORMANCE BASED
14 RATEMAKING AND TECHNICAL PERFORMANCE & CUSTOMER
15 SERVICE STANDARDS” June 8-9, 2000, NEA Training Room, NEA
16 Building, Diliman, Quezon City [P]
17
18 Presented a paper titled: “A Proposal for the Use of SAIDI, SAIFI, and MAIFI
19 as Reliability Indices for Philippine Distribution Utilities, and Historical Data
20 from the CEPALCO Distribution System”
21
22 CONSULTATIVE CONFERENCE/WORKSHOP ON THE PHILIPPINE
23 GRID AND DISTRIBUTION CODES
24 November 15-18, 1999, Manila Midtown Hotel, Manila
25
26 12TH MEETING, APEC INTER-UTILITY DSM PROGRAM
27 November 8-10, 1999, East-West Center, Honolulu, Hawaii
28
29 POWERING THE NEW MILLENNIUM: AN INTERNATIONAL
30 SYMPOSIUM ON DISTRIBUTED ENERGY RESOURCES
31 September 13-14, 1999, Wyndham Emerald Plaza Hotel, San Diego, California
32
33 ELENEX & POWERGEN PHILIPPINES '99 CONFERENCE
34 June 24-25, 1999, Century Park Hotel, Manila [P]
35
36 HAWAII-PHILIPPINES WORKSHOP ON ENERGY EFFICIENCY POLICY
37 AND TECHNOLOGY TRANSFER FOR IMPROVING ENVIRONMENTAL
38 PROTECTION AND ECONOMIC EFFICIENCY

1 Sponsored by the Philippines Department of Energy and the State of Hawaii
2 Government Department of Business, Economic Development, and Tourism
3 May 31 – June 1, 1999, Manila, Philippines [P]
4

5 17TH CONGRESS OF THE WORLD ENERGY COUNCIL
6 September 13-18, 1998, George R. Brown Convention Center, Houston, Texas
7

8 SEMINAR-WORKSHOP ON DISTRIBUTED BIO-ENERGY IN THE
9 AGRICULTURAL SECTOR August 24, 1998, Manila, and August 26, 1998,
10 Gen. Santos City [P]
11

12 WORKSHOP ON ENERGY EFFICIENCY POLICIES AND
13 TECHNOLOGIES OF THE PHILIPPINES: U.S. AND HAWAII TRANSFER
14 OPPORTUNITIES June 17-18, 1998, Shangri-la EDSA Plaza Hotel, Manila [P]
15

16 NINTH APEC INTER-UTILITY DSM LIAISON GROUP CONFERENCE
17 April 22-24, 1998, Tokyo, Japan
18

19 SUMMIT AND SEMINAR ON U.S. – PHILIPPINES UTILITY
20 PARTNERSHIP ISSUES: RESTRUCTURING, GLOBAL CLIMATE
21 CHANGE, AND ENERGY EFFICIENCY
22 February 23-24, 1998, New World Hotel, Makati City, Philippines [P]
23

24 ENVIRONMENTAL CONSIDERATIONS IN ELECTRIC UTILITY
25 INTEGRATED RESOURCE PLANNING: A Workshop for Utility Resource
26 Planners and Regulators
27 August 5-7, 1997, MERALCO, Ortigas Center, Pasig City, Philippines
28

29 SEMINAR-WORKSHOP ON THE MECHANISMS FOR TECHNOLOGY
30 TRANSFER AND DEVELOPMENT IN THE BIMP-EAGA
31 July 8-9, 1997, Davao City, Mindanao, Philippines [P]
32

33 WORKSHOP ON THE CONSOLIDATION OF THE PHILIPPINE
34 DISTRIBUTION CODE
35 April 15-17, 1997, Puerto Princesa, Palawan, Philippines [P]
36

37 CONFERENCE-WORKSHOP ON NEW AND RENEWABLE ENERGY
38 POLICIES April 10-11, 1997, White Rock Hotel, Subic, Zambales, Philippines

1 WORKSHOP ON THE USE OF ELFIN IN INTEGRATED RESOURCE
2 PLANNING February 26-28, 1997, Dusit Nikko Hotel, Makati City, Philippines
3
4 FIRST SEMINAR/WORKSHOP ON MINI-HYDROPOWER
5 DEVELOPMENT
6 December 11-12, 1996, Davao City, Philippines
7
8 CONVENTION ON ENERGY EFFICIENCY AND PRICING STRATEGY
9 TOWARDS GLOBAL COMPETITIVENESS
10 December 4-5, 1996, Dusit Nikko Hotel, Makati City, Philippines [P]
11
12 1996 WORKSHOP ON NEW AND RENEWABLE ENERGY SYSTEMS
13 October 15-17, 1996, INNOTECH, Diliman, Quezon City, Philippines [P]
14
15 CONSULTATION-WORKSHOP ON THE TRANSMISSION GRID CODE
16 October 1-2, 1996, National Engineering Center, Diliman, Quezon City,
17 Philippines
18
19 FIFTH APEC INTER-UTILITY DSM LIAISON GROUP CONFERENCE
20 March 26-29, 1996, Chiang Mai, Thailand
21
22 LOOKING AHEAD AT THE ELECTRIC POWER INDUSTRY IN THE
23 PHILIPPINES CONFERENCE
24 Nov 20-21, 1995, EDSA Plaza Hotel, Mandaluyong City, Philippines
25
26 EVALUATION, DEVELOPMENT, FINANCING OF RENEWABLE
27 ENERGY PROJECTS
28 October 18-20, 1995, Manila, Philippines
29
30 STUDY TOUR OF RENEWABLE ELECTRIC PLANTS
31 Sponsored by the U.S. Energy Association
32 March 12-18, 1995, Los Angeles and Southern California, U.S.A.
33
34 Those marked with [P] above indicate that I presented a paper during the
35 seminar or conference.
36
37 I also attended various meetings, conferences and public consultations
38 conducted by the ERC on topics related to the PBR.

1 10. What is your involvement in the preparation of the Application and its
2 supporting documents?

3

4 In the preparation of the Application for the Approval of the Annual Revenue
5 Requirement, I was the chairman of the committee assigned to do the
6 development of the capital expenditures included in the Application. I was also
7 involved in the preparation of the operating and maintenance expenses and in
8 the formulation of the Performance Incentive Scheme (PIS) for CEPALCO and
9 in coming-up with the energy and demand forecasts. In the preparation of the
10 Application, the functional units under my direct supervision provided the data
11 on capital expenditures and operating expenditures for the distribution system,
12 and I reviewed and approved the documents they submitted for inclusion in the
13 Application.

14

15 **Capital Expenditures**

16

17 11. You stated that you initially prepared the tables on capital expenditures. In
18 Schedule C of the supporting documents, there are tables, marked as Schedule
19 C.1.1, C.1.2 and C.1.3, all captioned “Capital Expenditure Forecasts”, but each
20 captioned also as “Total Dollar Real “, Total Peso Real, Total Dollar Nominal,
21 Total Peso Nominal, and Total Nominal – In Peso “, respectively. What does
22 these terms mean?

23

24 The following are the description of the Tables in Schedule C:

25

26 “Total Dollar Real” contains the projected amount of CAPEX, categorized
27 according to the Asset Category prescribed in the RDWR, that will be imported

28

29 “Total Peso Real” contains the projected amount of CAPEX, categorized
30 according to the Asset Category prescribed in the RDWR, that will be procured
31 locally.

32

33 “Total Dollar Nominal” contains the same projected CAPEX under “Total
34 Dollar Real” but the amount is adjusted by the projected US inflation for the
35 Regulatory Year.

36

1 “Total Peso Nominal” contains the same projected CAPEX under “Total Peso
2 Real” but the amount is adjusted by the projected Philippine inflation for the
3 Regulatory Year.

4
5 “Total Nominal – in Peso” contains the total Peso amount of the projected
6 CAPEX. This Table is actually the sum of the CAPEX under “Total Dollar
7 Nominal”, as converted to Peso using the projected Peso-US\$ exchange rate,
8 and the CAPEX under “Total Peso Nominal” PLUS freight and handling costs
9 estimated at 6.815% of the total Distribution Plant CAPEX (excluding Land and
10 Land Rights and Structures and Improvement).

11
12 12. What are these tables for ?

13
14 These Tables were provided to isolate the impact of the Inflation and foreign
15 exchange rates on the projected CAPEX. These segregations were provided in
16 Clause 4.2.7 of the Position Paper and Clause 4.12.6 of the RDWR.

17
18 13. How did you derived at the figures contained in the tables?

19
20 The amount of CAPEX in Tables “Total Dollar Real” and “Total Peso Real”
21 were the results of the projection made by each operating unit of the company.
22 Each operating unit was asked to project their unit’s CAPEX for the next 4 years
23 taking into consideration the following:

24
25 (a) Basic Determinants:

- 26 i. Customer and Load Growth
- 27 ii. Renewal of assets
- 28 iii. Refurbishment of assets

29 (b) Proposed Performance Targets

30 (c) Corporate Objectives

31
32 The resulting real values contained in Tables “Total Dollar Real” and “Total
33 Peso Real” are converted into nominal values and presented in Tables “Total
34 Dollar Nominal” and “Total Peso Nominal”, respectively, using the forecasted
35 inflation as contained in Schedule B2.

36
37 Dollar values were converted to Peso using the forecasted Peso-US\$ exchange
38 rate as contained in Schedule B3

1 14. In Paragraph 10, Table 4 of the Application, a summary of your proposed capital
2 expenditures from regulatory years 2007 to 2011 is listed, is shown, what are
3 these capital expenditures for?
4

5 These capital expenditures are necessary for the regular repair and maintenance
6 of distribution facilities, repair or acquisition of support or non-network
7 facilities and for new projects or investments needed to upgrade system capacity
8 to serve load growth, renew/refurbish the existing system and facilities, to meet
9 performance targets, and to comply with the Philippine Grid and Distribution
10 Codes and other regulatory requirements.
11

12 15. You mentioned of projects, what are these ?
13

14 These projects or investments are needed to upgrade system capacity to serve
15 load growth, renew/refurbish the existing system and facilities, to meet
16 performance targets, and to comply with the Philippine Grid and Distribution
17 Codes and other regulatory requirements. These projects are classified as Major,
18 Minor or Residual Projects, as follows:
19

20 **Major Projects:**
21

22 a. Development of 20MVA 69/34.5kv Substation at Kauswagan in 2009
23 projected to cost P 77,433,285 in nominal amount.
24

25 The addition of this substation in the western part will provide adequate
26 capacity to this high-growth area and prevent overloading of existing
27 substations. Annex A contains the details of this proposed project.
28

29 b. Development of 20MVA 69/34.5kV Substation at Baloy in 2007
30 projected to cost P 89,262,962 in nominal amount.
31

32 The addition of this substation in the eastern part will relieve the existing
33 substation supplying this area of excess load thereby prevents
34 overloading. This will also avoid a worse-case scenario from happening
35 when the existing transformer would be out of service for whatever
36 reason, since this would disrupt service to a large number of customers.
37 Annex Q contains the details of this proposed project.
38

1 c. Construction of a Corporate/Administrative Building in 2009 – 2011
2 projected to cost P 345,998,199 in nominal amount.

3
4 The purpose of the project is to provide adequate working spaces for the
5 staff members and provide sufficient spaces to service customers. More
6 details are presented in Annex B.

7
8 **Minor Projects:**

- 9
10 a. Upgrading of Carmen 10 MVA, 69-13.8kV Power Transformer at
11 Carmen
12 b. Installation of 10 MVA Power Transformer from Carmen to Macasandig
13 Substation
14 c. Upgrading of Pueblo Substation from 10 MVA to 20 MVA
15 d. Installation of the old 10 MVA, 69-34.5kV Power Transformer from
16 Carmen to Tagoloan Substation
17 e. New line constructions, re-conductoring and conversions
18 f. Installation of Circuit Breaker at Transco-Natumulan and Installation of
19 SCADA-ready Disconnect Switches in the T&D System (Annex C)
20 g. Asset Register Database Build-Up (Annex D)
21 h. Work Management System (Annex E)
22 i. Installation of Phase Markers (Annex F)
23 j. Compliance with the Philippine Grid and Distribution Code and other
24 regulatory requirements (Annexes G, H, I, J, K, L, M, N, O,& P)
25 k. Residual and other capital expenditures

26
27 16. Why do you need to implement these minor, residual projects and other capital
28 expenditures ?

29
30 The minor, residual and other capital expenditures/projects are necessary to
31 renew or refurbish the existing Distribution System that shall become non-
32 functional due to its deteriorating and ageing condition or obsolescence. These
33 capital expenditures include normal T&D system renewal or refurbishment, line
34 revision, minor and major line extensions.

35
36 These also include, among others, transportation equipment requirements,
37 corporate ICT infrastructure and projects, capital requirements incidental to the
38 hiring of additional personnel, and other capital items necessary to provide the

1 basic support facilities, systems, and personnel in order to carry the company's
2 obligations to provide better service and satisfy the requirements of existing and
3 future customers.

4
5 17. You mentioned that you have projects that are needed to enable CEPALCO to
6 comply with the Philippine Grid Code and the Philippine Distribution Code.
7 What are these projects ?

8
9 The following are the proposed projects to enable CEPALCO to comply with the
10 Philippine Grid and Distribution Codes:

- 11
- 12 a. [ERC-DCP-PGC-016-6-2] Distribution System Reliability Improvement
13 Projects: Installation of Automatic Circuit Reclosers in the Primary
14 Distribution System
 - 15 b. Compliance to the Requirements of Article 3.2.3.4 in DSC-PDC-001 of the
16 Philippine Distribution Code
 - 17 i. Formulation of Documents That Shall Contain the Operating and
18 Control Policy and Procedures For Regulating the Voltage Within
19 the Specified Limits of the PDC.
 - 20 ii. Creation and Keeping of Records That Will Demonstrate the
21 Instructions, Responses, and Events Relative to Voltage Control
22 of the Distribution System.
 - 23 c. Compliance to the Requirements of Article 3.2.3.4 and Article 3.2.5.2 in
24 DSC-PDC-001 of the Philippine Distribution Code: Install Automatic
25 Voltage Regulators at Every Medium Voltage (34.5- and 13.8-kV)
26 Distribution Bus or Feeder
 - 27 d. Compliance to the Requirements of ERC-DCP-PDC-042- 1 of the Philippine
28 Distribution Code and ERC-DSCPGC-024-1 of the Philippine Grid Code:
29 Development of Safety Coordination that specifies the standard procedures to
30 be used by CEPALCO and Users for the coordination, establishment,
31 maintenance and cancellation of necessary Safety Precautions on 13.8kV up
32 to 34.5kV and 69 kV up to 138kV Equipment when work or testing is to be
33 carried out on the Distribution System of CEPALCO or the User System.
 - 34 e. Project Number: ERC-DCP-PDC-027-1: Preparation to Complete the Fixed
35 Asset Boundary Document for all Connection Points
 - 36 f. Project Number: ERC-DCP-PDC-028-1 Title: Preparation to Complete
37 Electrical Diagrams for All Connection Points

1 g. Project Number: ERC-DCP-PDC-029-1 Title: Preparation to Complete
2 Connection Point Drawings for All Connection Points

3 h. Project Number: ERC-DCP-PDC-030-1 Title: Preparation to Complete
4 Distribution System Data for all Connection Points

5

6 18. Aside from complying with these codes, what are your justifications for these
7 projects?

8

9 Aside from complying with the codes, these projects will also prepare the
10 company for the full implementation of the PIS Scheme in the Third Regulatory
11 Period.

12

13 **Operating and Maintenance Expenditures**

14

15 19. What are these operating and maintenance expenditures for ?

16

17 These Operating and Maintenance expenditures are the expenses to be incurred
18 by CEPALCO to effectively operate its Distribution System and maintain its
19 asset base to allow it to remain serviceable at rated capacity for its normal
20 expected life.

21

22 20. In Paragraph 11, Table 5 of the Application, there is shown a summary of
23 proposed Operating and Maintenance Expenditure for regulatory years 2007 –
24 2011, and three categories such as: Distribution, Consumer Accounts,
25 Administration and General Expenses. What are these for ?

26

27 Distribution Expense are those incurred in the operation and maintenance of the
28 Distribution System

29

30 Consumer Accounts are those incurred in the general direction and supervision
31 of consumer accounting and collection activities

32

33 Administration and General Expenses are those incurred in the general
34 management of the utility

35

36 21. How are these figures derived ?

37

1 The figures were derived based on the forecasts made by each operating unit of
2 the company.

3

4 22. How were the forecast made ?

5

6 Each operating unit of the company were asked to come-up with forecasts
7 Operating and Maintenance Expenditures of their respective units for the next
8 four (4) years taking into consideration the historical trend and the following
9 forecasting bases:

10

11 a. Basic Determinants:

12 i. Customer and Load Growth

13 ii. Renewal of assets

14 iii. Refurbishment of assets

15 b. Proposed Performance Targets

16 c. Corporate Objectives

17

18 23. Why do you need to spend for these Operating and Maintenance Expenditures ?

19

20 The proposed Operating and Maintenance expenditures are necessary to enable
21 the company to operate and fulfill its obligation to serve load growth, to
22 maintain the existing facilities/system and personnel resources in order to
23 maintain or improve service reliability, meet system and service performance
24 targets, and ensure compliance with the regulatory requirements.

25

26 In our application we stated that there is a 9% average annual increase aside from
27 inflation, in the Operating and Maintenance expenditure. Such increase is needed
28 to attain the objective as earlier stated. In our supporting document in Schedule
29 G.2, a Historical Operating and Maintenance Expenditures for the years 2002 to
30 2006 is presented as to show that that the proposed Operating and Maintenance
31 Expenditure is within reasonable magnitude taking into account activities aimed
32 for improving efficiency.

33

34 24. Do you have other documents in support of these Operating and Maintenance
35 Expenditures ?

36

37 The following are the supporting documents for the Operating and maintenance
38 Expenditure forecasts:

- 1 a. Schedule G.1.4 Justification for the operating and maintenance
2 expenditure forecasts
3 b. Schedule G2 Historical operating and maintenance expenditure
4
5

6 **Performance Incentive Scheme**
7

8 25. What is this Performance Incentive Scheme ?
9

10 In general, Performance Incentive Scheme (PIS) is a mechanism that provides
11 reward to the Regulated Entity for achieving specified performance target levels
12 and penalizes it for failing to achieve specified target levels.
13

14 As provided in the RDWR and in the Framework for the Performance Incentive
15 Scheme that will apply for the 3rd Regulatory Period (the PIS Framework), the
16 PIS applicable for the 2nd Regulatory Period shall be composed of two
17 components:: (1) The Price-linked Incentive Scheme, and (2) the Guaranteed
18 Service Level (GSL) Scheme
19

20 26. Your application mention of a Price-Link Incentive Scheme, what is this ?
21

22 Under the Price-linked Incentive Scheme, the performance of CEPALCO will
23 be assessed against the network performance and service performance measures
24 prescribed in the RDWR and the PIS Framework. If performance levels exceed
25 predetermined targets, CEPALCO will be rewarded or, if performance levels fail
26 to meet predetermined performance targets, CEPALCO will be penalized.
27

28 The reward or penalty will be directly incorporated into the maximum average
29 price-cap for each Regulatory Year.
30

31 27. What are these performance indices: 1) SAIFI, 2) CAIDI, 3) Planned SAIDI, 4)
32 Voltage Variation, and 5) System Loss
33

34 The following are the definitions of the Network Performance Indices as defined
35 in the RDWR and the PIS Framework:
36

- 1 a) System Average Interruption Frequency Index (SAIFI). A measure of
2 the average number of sustained service interruptions experienced per
3 customer over the measurement period.
- 4 b) Customer Average Interruption Duration Index (CAIDI). A measure
5 of the average duration of sustained service interruptions over the
6 measurement period.
- 7 c) Planned System Average Interruption Duration Index (SAIDI). A
8 measure of the average duration of planned sustained service
9 interruptions for all customers over the measurement period.
- 10 d) Voltage regulation. A measure of the probability of Distribution
11 System voltage levels falling outside the boundaries prescribed in the
12 Distribution Code.
- 13 e) System losses. An indication of total losses on a Regulated
14 Distribution System, including technical and non-technical losses, or
15 the difference between the energy obtained from Grid Connection
16 Points and connection points to embedded generators, and that
17 delivered and invoiced to End Users.

18

19 28. In Paragraph 18, Table 12 of the Application, there is a table showing figures of
20 the Target Level, (the column under “Target”) for each of these performance
21 indices, how are these derived ?

22

23 The Performance Targets for each of the Performance Indices under the Price-
24 linked Scheme are derived as follows:

25

26 **For SAIFI, CAIDI and Planned SAIDI:**

27

28 As prescribed in the PIS Framework, the target performance values for these
29 indices will be set at the average value based on historical data. In addition to
30 the average value, CEPALCO proposed to include a factor to consider
31 maintenance and upgrading works that will be conducted during the 2nd
32 Regulatory Period.

33

34 It is projected that numerous extensive system maintenance and upgrading
35 works will be carried-out on CEPALCO’s lines and substations during the
36 Second Regulatory Period to further improve its network performance to attain
37 the reliability levels prescribed in the RDWR. Hence, in order not to be

1 constrained to perform these additional system maintenance and upgrading
 2 works during the second regulatory period, the target performance value should
 3 not be based on historical data alone. CEPALCO proposed that a factor should
 4 be added to the average historical value to consider these projected planned
 5 interruptions resulting from the system upgrading works that are beyond the
 6 normal maintenance works in the past. This factor will be called the upgrading
 7 factor and will be set based on the estimated duration and frequency of projected
 8 maintenance and upgrading works.

9
 10 **For Voltage Violation**

11
 12 The PIS Framework set the target probability of voltage violation at 4%.
 13 Considering that CEPALCO has not yet installed voltage regulators in its
 14 distribution system, we find this target too tight. Based on the measured voltage
 15 at various points of the distribution system, CEPALCO proposed a target
 16 probability of voltage violation of 20%.

17
 18 **For System Loss**

19
 20 CEPALCO will adopt the measurement scheme and the target levels prescribed
 21 in the PIS Framework. Hence, for the Second Regulatory Period, System Loss
 22 target would be 9.5%.

23
 24 29. How are the figures for Reward column, under Level 5 and Level 4, as well as
 25 the Penalty column, under Level 2 and 1 obtained ?

26
 27 The values under the reward and penalty columns were obtained based on the
 28 performance assessment bands and performance value prescribed in the PIS
 29 Framework which CEPALCO adopted, as follows:

30

| Performance Level | | Description | Performance Value |
|-------------------|---------|----------------------------------|-------------------|
| 1 | Penalty | Performance greatly below target | -1.0 |
| 2 | | Target not achieved | -0.5 |
| 3 | Target | Performance as per expectation | 0 |
| 4 | Reward | Target exceeded | +0.5 |
| 5 | | Target greatly exceeded | +1.0 |

31

1 However, on the performance bands of more than 2 standard deviations from
 2 the average value as prescribed in the PIS Framework, CEPALCO proposed
 3 to lower this to more than 1.5 standard deviations. Hence the performance
 4 bandwidth becomes:
 5

| | Performance Bands |
|----------------------------------|--|
| Performance greatly below target | Actual value more than 1.5 standard deviations above the target value |
| Target not achieved | Actual value more than 1 standard deviation, but less than 1.5 standard deviation, above the target value |
| Performance as per expectation | Actual value between 1 standard deviation above and 1 standard deviation below the target value |
| Target exceeded | Actual value more than 1 standard deviation, but less than 1.5 standard deviation below the target value |
| Target greatly exceeded | Actual value less than 1.5 standard deviations below the target value |

30. What is the purpose of the figures under the Weight column ?

The figures in the Weight column represent the weight of each performance indices. These weights will be applied on the performance assessment values for a year. The weighted performance values will then be the basis in setting the S-factor.

31. In the first table found on Schedule J, Page 8, per PIS Framework, the weight for “Call Center” is 0.10, while in your proposal it is zero, why is this so?

CEPALCO proposed a zero weight for Call Center because it proposed to exclude this performance measure for the 2nd Regulatory Period since the company is not offering such service yet.

1 32. Do you have documents to support the calculations?

2

3 Yes. We have submitted supporting documents as follows:

4

5 a) Schedule J.1.3.1. Calculation of the proposed targets for network
6 Performance

7 b) Schedule J.1.3.2. Calculation of the proposed targets for service
8 performance.

9 c) Schedules J.1.3.3 Calculation of monthly SAIFI, CAIDI and Planned
10 AIDI for the years 2002 – 2005

11

12 33. How will the this performance indices affect the Maximum Average Price ?

13

14 As mentioned earlier, under the Price-linked Incentive Scheme, any reward or
15 penalty will be directly added to or subtracted from the Maximum Average
16 Price. This is represented by the S-factor in the MAP formula provided in
17 Clause 4.2.1(b) of the RDWR, as follows:

18

$$19 \text{MAP}_t = [\text{MAP}_{t-1} \times \{1 + \text{CWI}_{t-X}\}] + S_t - K_t + \text{ITA}_t$$

20

21 34. What is this Guaranteed Service Level Scheme ?

22

23 As provided in the PIS framework, Guaranteed Service Levels (GSLs) Scheme
24 is an incentive mechanism in which customers will receive certain guarantees
25 with regard to the responsiveness and effectiveness of Regulated Entities. If
26 these GSLs are not met, predetermined penalties will be paid by the Regulated
27 Entities directly to customers.

28

29 35. In Paragraph 19, Table 13 of your Application, there are shown four
30 performance measures, what is your basis in coming up with these measures?

31

32 CEPALCO adopted the four performance measures under the GSL Scheme as
33 prescribed in the PIS Framework. However, CEPALCO proposed to further
34 classify the performance measure under GSLs 1 & 2 to consider the different
35 situations during planned and unplanned interruptions.

36

1 Also under GSL 3, CEPALCO proposed to further classify the performance
2 measure to consider the different response time if interruptions occur at the
3 Distribution Line, Distribution Transformer or Service Drop.
4

5 36. How did you arrive at the threshold level figures ?
6

7 For GSL 1-A, the proposed threshold level is equivalent to the longest duration
8 of sustained unplanned interruption over the 6-year period from Year 2000 to
9 2005.
10

11 For GSL 1-B, the proposed threshold level is equivalent to the longest duration
12 of sustained planned interruption over the 6-year period from Year 2000 to
13 2005.
14

15 For GSL 2-A, the proposed threshold level is equivalent to the most number of
16 sustained unplanned interruptions the 6-year period from Year 2000 to 2005.
17

18 For GSL 2-B, the proposed threshold level is equivalent to the most number of
19 sustained planned interruptions the 6-year period from Year 2000 to 2005.
20

21 For GSL3-A&B, the proposed threshold levels were equivalent to the average
22 value of the maximum restoration time over the 3-year historical period and the
23 median value over the same period.
24

25 For GSL3-C, the proposed threshold level is based on the frequency distribution
26 of the duration of restoration times for the Years 2003 – 2005
27

28 For GSL4, the proposed threshold level is based on the average time to connect
29 customer premises for a sample period covering the years 2003 to 2006.
30

31
32 37. Why do you segregate the planned and unplanned interruptions ?
33

34 The segregation of planned and unplanned interruptions was intended to
35 consider the differences in the company's performance under these types of
36 interruption.
37

1 38. What supporting information and calculations do you have for deriving these
2 figures?

3

4 The following are the supporting documents that we submitted:

5

6 (a) Historical data on the duration of sustained planned and unplanned
7 interruptions as contained in Schedule J.2.4.

8 (b) Historical data on the frequency of planned and unplanned interruptions as
9 contained in Schedule J.2.4

10 (c) Historical values of restoration time for faults on the secondary distribution
11 lines and distribution transformers are shown in Annex B of Schedule J

12 (d) Data on the frequency distribution of restoration time for faults at service
13 drop levels as contained in Annex C of Schedule J.

14

15 39. Are all kinds of interruptions taken into account in determining whether
16 CEPALCO meets the Guaranteed Service Levels ?

17

18 As provided in the PIS Framework, there are service interruptions which will
19 not form part in the accounting of the performance of the utility. These are
20 called Excluded Events because these external events happen outside the control
21 of the utility. Aside from the Excluded Events prescribed in the PIS Framework,
22 CEPALCO proposed to have the following events also classified as Excluded
23 Events:

24

25 a) Planned interruptions are excluded in GSL3.

26 b) Faults at customer side

27 c) Faults due to fire incidents not caused by CEPALCO facilities

28 d) Failure of the applicant to appear on the pre-agreed schedule

29 e) The applicant prefers a particular date which is beyond the standard
30 accomplishment period

31

32 40. How will the Guaranteed Service Level affect the rates ?

33

34 Under the GSL Scheme, if the company is unable to meet the guaranteed
35 performance levels, the customer is directly compensated in a form of a
36 reduction in their electric bills by an absolute amount.

37

1 41. It is stated in the application, that the Performance Incentive Scheme is in
2 accordance with the RDWR. Why is this so?

3

4 The Performance Incentive Scheme is provided under Clause 4.18 of the
5 RDWR. CEPALCO's PIS Application substantially adopted the scheme
6 provided in the said Rules and the PIS Framework

7

8 **Forecast Energy Consumption and Demand**

9

10

11 42. What is your method in the forecasting of the demand and energy requirement?

12

13 CEPALCO used the Energy Utilization Index (EUI) Method in forecasting the
14 Demand & Energy requirement for each Regulatory Year during the Second
15 Regulatory Period. This method used the average percent (%) growth in number
16 of customers as the driver in projecting for the energy (kWh) consumption.

17

18 The EUI was derived as the average energy consumption per customer class for
19 the five-year period starting year 2001 to 2005. This Utilization Index is applied
20 to the incoming customers within the Regulatory Year.

21

22 Forecasted energy is therefore computed as the Base Energy Consumption (Year
23 2005) plus the average consumption of the forecasted incoming customers after
24 applying the EUI

25

26

27 43. How are the figures derived in your forecast as shown in the tables in Schedule
28 H?

29

30 The forecast energy consumption figures under Schedule H.1 were derived by
31 adding the average consumption of the forecasted incoming customers,
32 computed based on the historical Energy Utilization Index, to the Base Year
33 data. The base Year used is 2005 operations.

34

35 The maximum demand forecast under Schedule H.2 were derived by applying
36 the average Load Factors to the forecasted energy consumption in Schedule H.1

37

38

1 IN WITNESS WHEREOF, I have hereunto affixed my signature this 23rd day
2 of September 2006, in Cagayan de Oro City.
