

Proposed issues for amendment in the OATS Rules are the following:

PROVISION	DESCRIPTION	COMMENTS/PROPOSAL
A.1	Definition of Embedded Generation	Is the definition of embedded generation still reasonable for current circumstances?
C 11.1	Minimum Charges	Why should minimum charges apply where TransCo cannot deliver energy? Should there be a rebate when Transco is responsible for outage?
F7(A1) 4.1	Customer Segments	Is there a need to consider different customer segments for transmission rates in the Third Regulatory Period?
F(AI)4.3 and F(AI)4.4	Constants G and L	The Commission has not activated the generation transmission charge arrangements. Do the provisions for G and L factors need to change for the Third Regulatory Period?
F(AIV)3	Connection Assets	Following the initial implementation of the connection charges, are amendments required to address any deficiencies identified?
